

Power your AI with trustworthy, real-time data

RudderStack is the lakehouse native CDP that powers your AI/ML models and data projects with clean, real-time, first-party data.

Drive revenue with first-party data

Your AI/ML models are only as good as your data. RudderStack data powers real-time personalization, churn prediction, and more.

Reduce data costs

Don't spend valuable engineering resources on low-value maintenance. RudderStack eliminates manual integration work so engineers can focus on delivering value.

Mitigate security risk

Keep your data safe by building your CDP on your lakehouse or data lake. RudderStack does not store your data and minimizes risk from third-party vendors.

How we do it:

- **Collect** and send real-time data to 200+ out-of-the-box integrations.
- **Unify** data to build a customer 360 view in your lakehouse or data lake.
- **Activate** data across tools to drive revenue growth.
